

Application for greenhouse – 41 Meadowfield Rd.

This application is for a lean-to greenhouse to be erected at the back of my garden against the far boundary leaning against the side face of the pre-existing wooden stable in my garden. Image 1 shows the view from my front gate along to the proposed location, with the greenhouse marked on in white and to scale. The greenhouse travelled with me from my old house and this is the only wall that it can actually be erected against.

The greenhouse is 8ftx8ft white, powder coated aluminium and moved house with me 5 years ago. The model is still on sale (Elite Windsor 4ftx8ft) as in image 2 but white not silver.

The front of the greenhouse will be flush with the front of the stable and at 6'7" the ridge of the greenhouse will lie just below the lowest eaves of the stable (or it wouldn't fit) (3).

It will extend 18" beyond the existing stable footings (which are 33") onto a paved area (image 4)).

At the rear it will be c.1.2m from the boundary (which is the back of the stable)(5)

You can see how high and thick the hedge is – the greenhouse will not be seen by neighbours in the plot behind.
